**Abstract**

“The invention related to a collapsible transport vehicle comprising a load-receiving surface and at least one pair of running wheels. In order to create a transport vehicle that can be assembled and collapsed in a simple manner requiring only a few manipulations and that has a relatively small size in a collapsed position, the running wheels are arranged on wheel suspensions which are pivotally connected to one side of the load-receiving surface, and the load-receiving surface is provided with at least one joint, by which the load receiving surface is collapsed.”
